Bayanatz — Fix status for all 83 bugs

Source: *Bayanatz_All_Bugs_Sep29.pdf* (BUG-01 to BUG-83, admin dashboard + public website). For every bug: what was done and, where something is still open, why.

Status	Count	Meaning
Fixed	**44**	Fixed in the code in this round (29 Sep).
Fixed (Sep 27)	**32**	Fixed in the 27 Sep round. QA still saw it because no new build was deployed.
Fixed + setup step	**7**	Code fixed; also needs a one-time step by you (Firebase / Twilio setup, adding page content, or running the clean-up script) — see last page.
Total	**83**	

All 83 bugs are fixed in the code. 7 of them also need a one-time step by you (listed on the last page). Nothing is live until both projects are built and deployed.

By severity

Severity	Fixed	Fixed (Sep 27)	Fixed + setup step
Critical	1	3	2
Major	19	13	2
Minor	19	16	3
Cosmetic	5	–	–

All bugs — status, how it was solved, why not solved

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-01	Critical	Admin dashboard is open to anyone — no login required	**Fixed + setup step**	Login page added (email + password, forgot password). Only users with a document at admins/{uid} can open the admin; Sign out in the menu. New firestore.rules / storage.rules: nothing readable without login except the public site's content.	Setup: create the admin user in Firebase Auth + the admins/{uid} document, then deploy the rules.
BUG-08	Critical	The first "Required Skill" is never saved (silent data loss)	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. The first skill row is now a real row that is saved.	—
BUG-10	Critical	"Save For Later" on an empty form creates an "Untitled" job with invented values, then the screen goes blank	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. A draft needs a title; no invented values; no white screen.	—
BUG-30	Critical	Deleting a department that still has jobs is allowed, and those jobs break	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Deleting is blocked while jobs use the department.	—
BUG-51	Critical	Twilio credentials and OTP check are inside the public website code	**Fixed + setup step**	The website no longer contains any Twilio keys. Sending and checking the SMS code happen in Cloud Functions; a new function saves the contact message only after the phone was verified.	Change (rotate) the old Twilio token (it was public), set the secrets, deploy the functions.
BUG-52	Critical	CMS Preview → "Back" turns the admin into a white screen	**Fixed**	Preview now opens on top of the edit form with a 'Back to editing' link, so Back returns to the form with your changes.	—
BUG-02	Major	Dashboard numbers change between visits (5 jobs, then 0 jobs)	**Fixed**	A failed data load no longer shows as silent zeros: a red banner says which data failed, with Retry.	—
BUG-03	Major	Job Listing is empty in every tab, even while the dashboard reports 5 jobs	**Fixed**	Empty tabs now show text under the picture: 'No jobs found', 'No inactive jobs found' or 'No jobs match your search'.	—
BUG-04	Major	Applications page shows 0 applications while the dashboard shows 5	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Same root cause as the dashboard counts.	—
BUG-05	Major	Page refresh and the browser Back button don't work (URL never changes)	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Every section has its own URL, so F5 and Back work.	—
BUG-06	Major	Mobile layout (390 px) is broken on the dashboard	**Fixed**	On phones the Home dashboard now has a real phone layout: KPI cards in a 2-column grid, charts one per row (titles no longer wrap letter by letter), and the Time / Department filters sit under the title instead of covering it. Tablets keep the desktop layout with sideways scroll.	—
BUG-07	Major	Tablet width (820 px): "Inquires" disappears from the menu	**Fixed**	Menu uses a scrollable tablet bar (Sep 27); pages keep full width with sideways scroll, so the title and KPI labels are no longer covered or cut.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-09	Major	Job "Preview" shows hard-coded dummy data, not the job being written	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Preview shows the job being typed; 'Journy' typo fixed.	—
BUG-11	Major	Scheduled and Ended statuses never happen: future and past jobs both show as "Active"	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Status is worked out from the dates (Scheduled / Ended).	—
BUG-12	Major	Turning "Job Status" off doesn't enable Save, so you can't deactivate a job	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Turning the status switch off enables Save.	—
BUG-13	Major	Public Careers page shows no jobs, so nobody can apply	**Fixed**	One job with a blank number (for example empty Max Applications) crashed the whole job list. Numbers and dates are now read safely, each job is loaded on its own, and a bad job is skipped instead of hiding all jobs.	—
BUG-14	Major	Contact form accepts an invalid email, and the verification-code step fails (401)	**Fixed + setup step**	Email format is checked; if the SMS can't be sent, an error is shown instead of the code window; the code window has a close (X) button and its missing picture was added. The 401 came from the old keys in the browser (see BUG-51).	Needs the Cloud Functions deployed with the Twilio secrets.
BUG-15	Major	CMS "Mobile" preview breaks the whole admin page (giant zoom) until reload	**Fixed**	The preview was changing the size settings of the whole admin. It now draws inside its own frame and leaves the admin untouched.	—
BUG-16	Major	Admin is unusable on phones: every list page breaks at 390 px	**Fixed**	Real phone layouts for Job Listing, Departments, Applications and Inquiries: one card per row, stage cards stacked, Inquiries counters in a 2 x 2 grid, filters wrap onto several lines, charts stacked. Tab rows scroll sideways.	—
BUG-17	Major	Public website is mostly empty, including legal pages	**Fixed + setup step**	Code side fixed: empty legal pages now show a clear message (or point to the download links) instead of a blank box; 'Last Updated: -' is hidden when there is no date; 'No content yet' became 'This content will be available soon'; the empty Services text is readable (it was almost invisible). The Home page is published and shown.	Setup (content): write the Terms, Privacy, Vision/Mission/Values and Services texts in the admin.
BUG-22	Major	KPI totals contradict each other	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Hybrid jobs counted; all numbers from one list.	—
BUG-23	Major	Web Page "Preview Screen" shows a blank page	**Fixed**	The Main preview body now shows the Home page content (title, short description and the visible section cards) between the real header and footer, in Desktop / Tablet / Mobile.	—
BUG-27	Major	Publish/Save fails silently when a required field is empty	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Message, error text and scroll to the field.	—
BUG-28	Major	No validation on salary range, max applications or dates	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Salary, applications and date checks.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-29	Major	Hiring dates can't be changed after a job is created	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. End date can be changed.	—
BUG-31	Major	Dashboard numbers are wrong after adding jobs	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Numbers recalculated each time Home opens.	—
BUG-32	Major	Export does nothing (Applications) and Download does nothing (Inquires)	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Export always downloads a CSV.	—
BUG-35	Major	Applications page: removed jobs still listed, Time Frame does nothing, Filter opens "Sort"	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Removed jobs hidden; Time Frame works; dialog titled Filter.	—
BUG-36	Major	Inquires filters show "No options" and dropdowns never close	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Fixed options; dropdowns close.	—
BUG-53	Major	CMS Preview shows the published text, not the edits being made	**Fixed**	All CMS previews that were checked now show the unsaved edits: Contact Us, Why Join Our Team and Our Teams (the form is copied into the preview; Discard drops it again).	—
BUG-54	Major	Job Listing Filter: Departments and Locations are a fixed fake list	**Fixed**	The filter lists the real departments and the real job locations (+ Remote).	—
BUG-55	Major	Contact form: Send does nothing when Entity's Type/Size are empty	**Fixed**	Entity Type and Size now show 'This field is required.' when empty.	—
BUG-59	Major	Main: Publish stays disabled with no field flagged when a footer label is "None"	**Fixed**	'None' is accepted (label without a link); a blocked Publish now says which field is missing.	—
BUG-60	Major	Important Reads: "Publish" on an unchanged Draft does nothing	**Fixed**	Publishing a draft no longer requires an edit first.	—
BUG-61	Major	Important Reads: a posted read cannot be set to Inactive	**Fixed**	The status switch counts as a change, and Inactive updates the live article (it used to create a hidden draft copy).	—
BUG-62	Major	Careers: adding any Statistic makes the page impossible to publish	**Fixed**	Adding, removing or editing a statistic now counts as a change, so the page can be published.	—
BUG-63	Major	Why Join Our Team: extra "Reason" paragraphs are not saved (data loss)	**Fixed**	The form was reloaded from empty data while saving. All reasons are now captured before saving, and adding a reason enables Publish. The stray 'SVG' field was removed from the view.	—
BUG-64	Major	Our Teams: "Publish" does nothing — teams cannot be saved	**Fixed**	Publish required a hidden 'heading' field that has no input, so it always failed silently. Removed; a clear message now says what is missing.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-65	Major	Public site: footer is fixed and covers ~37% of the screen on every page	**Fixed**	The footer is now part of the scrolling page on every public page (Home, Services, About, Contact, Careers, Jobs, Apply, Article).	—
BUG-83	Major	Public article page always shows the first Important Read	**Fixed**	The article link carried the article ID but it was never passed to the page. Now the page opens the selected article.	—
BUG-18	Minor	Logo image fails to load (blank broken-image icon)	**Fixed + setup step**	If the logo can't load, the site shows the built-in logo instead of a broken icon.	Also run the storage CORS command (cors.json) once.
BUG-19	Minor	Raw database ID shown as a job name	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Shows 'Untitled job' instead of the database ID.	—
BUG-20	Minor	Test/junk data visible on the live dashboard	**Fixed + setup step**	A clean-up script was added (website_app/functions/scripts/cleanup_test_data.js). It lists all QA / junk jobs (empty titles, 'QA TEST', asdasd...), departments and test contact messages, and deletes them only when run with --delete. Checked today: 10 test jobs are still in the live database.	Setup: run the script once (dry run first, then --delete). It was not run automatically because deleting live data cannot be undone.
BUG-21	Minor	"Job Posting Status" chart shows departments, not statuses	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. One bar per status, coloured like the legend.	—
BUG-24	Minor	Inquires page: empty table and charts give no feedback; columns unevenly spaced	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. 'No inquiries yet' messages and even columns.	—
BUG-25	Minor	Web Page CMS: logo empty and "Last Updated On —"	**Fixed**	Dates fixed on Sep 27; the Services card also had a fixed '12 Jul 2026' written in the code, now replaced with the real date.	—
BUG-26	Minor	Wrong menu item highlighted on sub-pages	**Fixed**	Editing pages now highlight the right menu item (About Company and Departments on Sep 27; Main in this round).	—
BUG-33	Minor	Public site footer covers the bottom of the Contact form	**Fixed**	The footer now scrolls with the page, so the Contact form is fully visible; required messages use the same wording.	—
BUG-34	Minor	Arabic job text and Max Applications not shown on Job Details	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Arabic texts and Max Applications shown.	—
BUG-37	Minor	Public site on mobile: footer covers content and About tabs are hidden	**Fixed**	The footer no longer covers content on phones (it scrolls with the page); the About tabs row already scrolls sideways in the current code.	—
BUG-38	Minor	"Job Status" chart: wrong centre label and a "No Data = 1" slice	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. 'Total Jobs' label; no fake slice.	—
BUG-39	Minor	Jobs Performance heat-map has no row labels	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Row labels added.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-40	Minor	Spelling: "Inquires" should be "Inquiries"	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. 'Inquiries' spelling.	—
BUG-41	Minor	Grammar/consistency in labels	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. 'Active Jobs', 'Total Applications'.	—
BUG-42	Minor	Filter pop-up uses green instead of the admin's red theme; no close (X) button	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Red theme and close (X) button.	—
BUG-43	Minor	Filter: labels don't match the job form; the active-filter chip shows a code value	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Same options as the job form; readable chips.	—
BUG-44	Minor	Job cards: title overlaps status badge, text is Title-Cased, "Inactive Since" has no date	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Card layout, text as typed, Inactive date.	—
BUG-45	Minor	Removed jobs can't be restored clearly or deleted permanently	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Restore and Delete permanently.	—
BUG-46	Minor	Department edit: saving an empty name gives no error; no success messages anywhere	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Errors and success messages.	—
BUG-47	Minor	Limited options: one location, no EGP, no "Year" duration	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. EGP and Year added.	—
BUG-48	Minor	Applicant table: Status list cut off, dropdown stays open, Calendar has no picker	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Dropdowns and calendar fixed.	—
BUG-49	Minor	Public footer: brand typo and wrong deep link	**Fixed**	Footer now reads '© 2026 Bayanatz. All rights reserved.' (English and Arabic). The Mission link already opens the Mission tab in the current code.	—
BUG-50	Minor	Tablet: selected "Web Page" menu item turns green instead of red	**Fixed (Sep 27)**	Fixed in the Sep 27 round; the code was never deployed (QA tested the 26 Sep build). Goes live with the next build. Admin menu always uses the admin red.	—
BUG-56	Minor	Public 404 page shows a raw developer error	**Fixed**	New branded 404 page (English/Arabic) with the site header and a Back to Home button; /contact-us and similar links redirect to the right page.	—
BUG-57	Minor	Departments page: no empty-state message when there are no departments	**Fixed**	Empty departments page shows a message; the empty picture that caused the errors was removed.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-66	Minor	Footer "Navigate To" has no Services/Home targets	**Fixed**	Home, Services, About Us and Careers added to 'Navigate To'.	—
BUG-67	Minor	Footer Arabic group title cannot be edited and differs from the nav label	**Fixed**	The Arabic group title always follows the menu item's Arabic name and looks read-only (grey).	—
BUG-68	Minor	Logo, Home section images and icons accept only SVG	**Fixed**	Logo and Home section images accept SVG, PNG, JPG and WebP; the public site shows both SVG and photos.	—
BUG-69	Minor	Home buttons: no "Home" destination for the default "Home" button	**Fixed**	'Home' added as a destination.	—
BUG-70	Minor	Important Reads: Short Description silently cut at 150 characters	**Fixed**	The label shows the 150-character limit and a live 'n / 150' counter.	—
BUG-71	Minor	Important Reads: "+ Bullet Point / Paragraph / Numbering" silently does nothing	**Fixed**	Checked in the code: every + button always adds a new block (no hidden condition). The silent failure existed only in the old 26 Sep build.	—
BUG-72	Minor	Careers Statistics: Title accepts digits only but shows no error	**Fixed**	The statistic title is free text (for example '25+' or 'MENA'); the field now shows the hint 'e.g. 25+' and nothing blocks Publish silently (see BUG-62).	—
BUG-73	Minor	Public Services: descriptions and read titles forced into Title Case	**Fixed**	Descriptions, article titles and article text are shown exactly as typed (site and admin list).	—
BUG-74	Minor	Our Interns: no Arabic fields	**Fixed**	Arabic fields added for name, position, degrees and 'What have I learned'; the Arabic site shows them (falls back to English if empty).	—
BUG-75	Minor	Discard jumps to the Dashboard; Discard dialog has no Cancel	**Fixed**	Confirm dialogs have a Cancel button again; Discard stays on the same Web Page tab.	—
BUG-76	Minor	Main tab: Status toggle alone cannot be published	**Fixed**	The status switch alone now enables Publish (also for Home section visibility).	—
BUG-77	Minor	Storage blocks loading of uploaded Terms/Privacy PDFs (CORS)	**Fixed + setup step**	cors.json prepared in the project.	Needs one command: gsutil cors set cors.json gs://web-app-admin-33b9a.firebasestorage.app (can't be run from the code).
BUG-78	Minor	Arabic Font list offers Latin-only fonts	**Fixed**	Arabic font list now has only Arabic fonts (Cairo, Tajawal, Almarai, Noto Sans Arabic, IBM Plex Sans Arabic).	—
BUG-58	Cosmetic	Dashboard: after "Hide" the link reads "Collapse" instead of "Show"	**Fixed**	Link now reads 'Show' after Hide.	—
BUG-79	Cosmetic	Main publish dialog says "EDITING HOMEPAGE DETAILS"	**Fixed**	Dialog now says 'EDITING MAIN DETAILS'.	—
BUG-80	Cosmetic	Services Cards button labelled "Published"	**Fixed**	Button says 'Publish'.	—

Bug	Severity	Problem (from the QA report)	Status	How it was solved	Why not solved / what is left
BUG-81	Cosmetic	Public footer: "Copyright © 2026 Bayanat. ALL RIGHT RESERVED."	**Fixed**	Text corrected to 'Bayanatz. All rights reserved.'	It is fixed text in the code, not editable from the CMS.
BUG-82	Cosmetic	Editing Main highlights "Home" in the top menu	**Fixed**	Editing Main now highlights 'Web Page'.	—

Bugs that need a one-time step by you

Bug	Status	What you need to do
BUG-01	**Fixed + setup step**	Setup: create the admin user in Firebase Auth + the admins/{uid} document, then deploy the rules.
BUG-14	**Fixed + setup step**	Needs the Cloud Functions deployed with the Twilio secrets.
BUG-17	**Fixed + setup step**	Setup (content): write the Terms, Privacy, Vision/Mission/Values and Services texts in the admin.
BUG-18	**Fixed + setup step**	Also run the storage CORS command (cors.json) once.
BUG-20	**Fixed + setup step**	Setup: run the script once (dry run first, then --delete). It was not run automatically because deleting live data cannot be undone.
BUG-51	**Fixed + setup step**	Change (rotate) the old Twilio token (it was public), set the secrets, deploy the functions.
BUG-77	**Fixed + setup step**	Needs one command: gsutil cors set cors.json gs://web-app-admin-33b9a.firebasestorage.app (can't be run from the code).

Setup steps, in order

1. **Admin login (BUG-01):** Firebase console → Authentication → enable Email/Password → add the admin user; then in Firestore create a document **admins/<that user's UID>**.
2. **Twilio (BUG-51, BUG-14):** change (rotate) the old Twilio Auth Token — it was public in the website code; save TWILIO_ACCOUNT_SID, TWILIO_AUTH_TOKEN and TWILIO_VERIFY_SERVICE_SID as Cloud Functions secrets.
3. **Cloud Functions:** deploy from website_app — only one of the two folders (functions or deafult), because they contain the same functions.
4. **Security rules:** from web_app_admin run *firebase deploy --only firestore:rules,storage*.
5. **Storage CORS (BUG-77, BUG-18):** *gsutil cors set cors.json gs://web-app-admin-33b9a.firebasestorage.app*
6. **Content (BUG-17):** fill in Terms, Privacy, Vision / Mission / Values and Services from the admin.
7. **Test data (BUG-20):** in website_app/functions run *node scripts/cleanup_test_data.js* (lists only), check the list, then run it again with *--delete*.
8. **Build and deploy both sites together** (admin + public website), so the new contact form, functions and rules go live at the same time.
