Bayanatz — Fixed bugs (BUG-01 to BUG-83)

Bug	Severity	Problem	How it was fixed
BUG-01	Critical	Admin dashboard is open to anyone — no login required	Login page added (email + password, forgot password). Only users with a document at admins/{uid} can open the admin; Sign out in the menu. New firestore.rules / storage.rules: nothing readable without login except the public site's content. *One-time setup: create the admin user in Firebase Auth + the admins/{uid} document, then deploy the rules.*
BUG-08	Critical	The first "Required Skill" is never saved (silent data loss)	The first skill row is now a real row that is saved.
BUG-10	Critical	"Save For Later" on an empty form creates an "Untitled" job with invented values, then the screen goes blank	A draft needs a title; no invented values; no white screen.
BUG-30	Critical	Deleting a department that still has jobs is allowed, and those jobs break	Deleting is blocked while jobs use the department.
BUG-51	Critical	Twilio credentials and OTP check are inside the public website code	The website no longer contains any Twilio keys. Sending and checking the SMS code happen in Cloud Functions; a new function saves the contact message only after the phone was verified. *One-time setup: Change (rotate) the old Twilio token (it was public), set the secrets, deploy the functions.*
BUG-52	Critical	CMS Preview → "Back" turns the admin into a white screen	Preview now opens on top of the edit form with a 'Back to editing' link, so Back returns to the form with your changes.
BUG-02	Major	Dashboard numbers change between visits (5 jobs, then 0 jobs)	A failed data load no longer shows as silent zeros: a red banner says which data failed, with Retry.
BUG-03	Major	Job Listing is empty in every tab, even while the dashboard reports 5 jobs	Empty tabs now show text under the picture: 'No jobs found', 'No inactive jobs found' or 'No jobs match your search'.
BUG-04	Major	Applications page shows 0 applications while the dashboard shows 5	Same root cause as the dashboard counts.
BUG-05	Major	Page refresh and the browser Back button don't work (URL never changes)	Every section has its own URL, so F5 and Back work.
BUG-06	Major	Mobile layout (390 px) is broken on the dashboard	On phones the Home dashboard now has a real phone layout: KPI cards in a 2-column grid, charts one per row (titles no longer wrap letter by letter), and the Time / Department filters sit under the title instead of covering it. Tablets keep the desktop layout with sideways scroll.
BUG-07	Major	Tablet width (820 px): "Inquires" disappears from the menu	Menu uses a scrollable tablet bar (Sep 27); pages keep full width with sideways scroll, so the title and KPI labels are no longer covered or cut.
BUG-09	Major	Job "Preview" shows hard-coded dummy data, not the job being written	Preview shows the job being typed; 'Journy' typo fixed.
BUG-11	Major	Scheduled and Ended statuses never happen: future and past jobs both show as "Active"	Status is worked out from the dates (Scheduled / Ended).
BUG-12	Major	Turning "Job Status" off doesn't enable Save, so you can't deactivate a job	Turning the status switch off enables Save.
BUG-13	Major	Public Careers page shows no jobs, so nobody can apply	One job with a blank number (for example empty Max Applications) crashed the whole job list. Numbers and dates are now read safely, each job is loaded on its own, and a bad job is skipped instead of hiding all jobs.

Bug	Severity	Problem	How it was fixed
BUG-14	Major	Contact form accepts an invalid email, and the verification-code step fails (401)	Email format is checked; if the SMS can't be sent, an error is shown instead of the code window; the code window has a close (X) button and its missing picture was added. The 401 came from the old keys in the browser (see BUG-51). *One-time setup: Needs the Cloud Functions deployed with the Twilio secrets.*
BUG-15	Major	CMS "Mobile" preview breaks the whole admin page (giant zoom) until reload	The preview was changing the size settings of the whole admin. It now draws inside its own frame and leaves the admin untouched.
BUG-16	Major	Admin is unusable on phones: every list page breaks at 390 px	Real phone layouts for Job Listing, Departments, Applications and Inquiries: one card per row, stage cards stacked, Inquiries counters in a 2 x 2 grid, filters wrap onto several lines, charts stacked. Tab rows scroll sideways.
BUG-17	Major	Public website is mostly empty, including legal pages	Code side fixed: empty legal pages now show a clear message (or point to the download links) instead of a blank box; 'Last Updated: -' is hidden when there is no date; 'No content yet' became 'This content will be available soon'; the empty Services text is readable (it was almost invisible). The Home page is published and shown. *One-time setup: write the Terms, Privacy, Vision/Mission/Values and Services texts in the admin.*
BUG-22	Major	KPI totals contradict each other	Hybrid jobs counted; all numbers from one list.
BUG-23	Major	Web Page "Preview Screen" shows a blank page	The Main preview body now shows the Home page content (title, short description and the visible section cards) between the real header and footer, in Desktop / Tablet / Mobile.
BUG-27	Major	Publish/Save fails silently when a required field is empty	Message, error text and scroll to the field.
BUG-28	Major	No validation on salary range, max applications or dates	Salary, applications and date checks.
BUG-29	Major	Hiring dates can't be changed after a job is created	End date can be changed.
BUG-31	Major	Dashboard numbers are wrong after adding jobs	Numbers recalculated each time Home opens.
BUG-32	Major	Export does nothing (Applications) and Download does nothing (Inquires)	Export always downloads a CSV.
BUG-35	Major	Applications page: removed jobs still listed, Time Frame does nothing, Filter opens "Sort"	Removed jobs hidden; Time Frame works; dialog titled Filter.
BUG-36	Major	Inquires filters show "No options" and dropdowns never close	Fixed options; dropdowns close.
BUG-53	Major	CMS Preview shows the published text, not the edits being made	All CMS previews that were checked now show the unsaved edits: Contact Us, Why Join Our Team and Our Teams (the form is copied into the preview; Discard drops it again).
BUG-54	Major	Job Listing Filter: Departments and Locations are a fixed fake list	The filter lists the real departments and the real job locations (+ Remote).
BUG-55	Major	Contact form: Send does nothing when Entity's Type/Size are empty	Entity Type and Size now show 'This field is required.' when empty.
BUG-59	Major	Main: Publish stays disabled with no field flagged when a footer label is "None"	'None' is accepted (label without a link); a blocked Publish now says which field is missing.
BUG-60	Major	Important Reads: "Publish" on an unchanged Draft does nothing	Publishing a draft no longer requires an edit first.
BUG-61	Major	Important Reads: a posted read cannot be set to Inactive	The status switch counts as a change, and Inactive updates the live article (it used to create a hidden draft copy).

Bug	Severity	Problem	How it was fixed
BUG-62	Major	Careers: adding any Statistic makes the page impossible to publish	Adding, removing or editing a statistic now counts as a change, so the page can be published.
BUG-63	Major	Why Join Our Team: extra "Reason" paragraphs are not saved (data loss)	The form was reloaded from empty data while saving. All reasons are now captured before saving, and adding a reason enables Publish. The stray 'SVG' field was removed from the view.
BUG-64	Major	Our Teams: "Publish" does nothing — teams cannot be saved	Publish required a hidden 'heading' field that has no input, so it always failed silently. Removed; a clear message now says what is missing.
BUG-65	Major	Public site: footer is fixed and covers ~37% of the screen on every page	The footer is now part of the scrolling page on every public page (Home, Services, About, Contact, Careers, Jobs, Apply, Article).
BUG-83	Major	Public article page always shows the first Important Read	The article link carried the article ID but it was never passed to the page. Now the page opens the selected article.
BUG-18	Minor	Logo image fails to load (blank broken-image icon)	If the logo can't load, the site shows the built-in logo instead of a broken icon. *One-time setup: Also run the storage CORS command (cors.json) once.*
BUG-19	Minor	Raw database ID shown as a job name	Shows 'Untitled job' instead of the database ID.
BUG-20	Minor	Test/junk data visible on the live dashboard	A clean-up script was added (website_app/functions/scripts/cleanup_test_data.js). It lists all QA / junk jobs (empty titles, 'QA TEST', asdasd...), departments and test contact messages, and deletes them only when run with --delete. Checked today: 10 test jobs are still in the live database. *One-time setup: run the script once (dry run first, then --delete). It was not run automatically because deleting live data cannot be undone.*
BUG-21	Minor	"Job Posting Status" chart shows departments, not statuses	One bar per status, coloured like the legend.
BUG-24	Minor	Inquires page: empty table and charts give no feedback; columns unevenly spaced	'No inquiries yet' messages and even columns.
BUG-25	Minor	Web Page CMS: logo empty and "Last Updated On —"	Dates fixed on Sep 27; the Services card also had a fixed '12 Jul 2026' written in the code, now replaced with the real date.
BUG-26	Minor	Wrong menu item highlighted on sub-pages	Editing pages now highlight the right menu item (About Company and Departments on Sep 27; Main in this round).
BUG-33	Minor	Public site footer covers the bottom of the Contact form	The footer now scrolls with the page, so the Contact form is fully visible; required messages use the same wording.
BUG-34	Minor	Arabic job text and Max Applications not shown on Job Details	Arabic texts and Max Applications shown.
BUG-37	Minor	Public site on mobile: footer covers content and About tabs are hidden	The footer no longer covers content on phones (it scrolls with the page); the About tabs row already scrolls sideways in the current code.
BUG-38	Minor	"Job Status" chart: wrong centre label and a "No Data = 1" slice	'Total Jobs' label; no fake slice.
BUG-39	Minor	Jobs Performance heat-map has no row labels	Row labels added.
BUG-40	Minor	Spelling: "Inquires" should be "Inquiries"	'Inquiries' spelling.
BUG-41	Minor	Grammar/consistency in labels	'Active Jobs', 'Total Applications'.

Bug	Severity	Problem	How it was fixed
BUG-42	Minor	Filter pop-up uses green instead of the admin's red theme; no close (X) button	Red theme and close (X) button.
BUG-43	Minor	Filter: labels don't match the job form; the active-filter chip shows a code value	Same options as the job form; readable chips.
BUG-44	Minor	Job cards: title overlaps status badge, text is Title-Cased, "Inactive Since" has no date	Card layout, text as typed, Inactive date.
BUG-45	Minor	Removed jobs can't be restored clearly or deleted permanently	Restore and Delete permanently.
BUG-46	Minor	Department edit: saving an empty name gives no error; no success messages anywhere	Errors and success messages.
BUG-47	Minor	Limited options: one location, no EGP, no "Year" duration	EGP and Year added.
BUG-48	Minor	Applicant table: Status list cut off, dropdown stays open, Calendar has no picker	Dropdowns and calendar fixed.
BUG-49	Minor	Public footer: brand typo and wrong deep link	Footer now reads '© 2026 Bayanatz. All rights reserved.' (English and Arabic). The Mission link already opens the Mission tab in the current code.
BUG-50	Minor	Tablet: selected "Web Page" menu item turns green instead of red	Admin menu always uses the admin red.
BUG-56	Minor	Public 404 page shows a raw developer error	New branded 404 page (English/Arabic) with the site header and a Back to Home button; /contact-us and similar links redirect to the right page.
BUG-57	Minor	Departments page: no empty-state message when there are no departments	Empty departments page shows a message; the empty picture that caused the errors was removed.
BUG-66	Minor	Footer "Navigate To" has no Services/Home targets	Home, Services, About Us and Careers added to 'Navigate To'.
BUG-67	Minor	Footer Arabic group title cannot be edited and differs from the nav label	The Arabic group title always follows the menu item's Arabic name and looks read-only (grey).
BUG-68	Minor	Logo, Home section images and icons accept only SVG	Logo and Home section images accept SVG, PNG, JPG and WebP; the public site shows both SVG and photos.
BUG-69	Minor	Home buttons: no "Home" destination for the default "Home" button	'Home' added as a destination.
BUG-70	Minor	Important Reads: Short Description silently cut at 150 characters	The label shows the 150-character limit and a live 'n / 150' counter.
BUG-71	Minor	Important Reads: "+ Bullet Point / Paragraph / Numbering" silently does nothing	Checked in the code: every + button always adds a new block (no hidden condition). The silent failure existed only in the old 26 Sep build.
BUG-72	Minor	Careers Statistics: Title accepts digits only but shows no error	The statistic title is free text (for example '25+' or 'MENA'); the field now shows the hint 'e.g. 25+' and nothing blocks Publish silently (see BUG-62).
BUG-73	Minor	Public Services: descriptions and read titles forced into Title Case	Descriptions, article titles and article text are shown exactly as typed (site and admin list).

Bug	Severity	Problem	How it was fixed
BUG-74	Minor	Our Interns: no Arabic fields	Arabic fields added for name, position, degrees and 'What have I learned'; the Arabic site shows them (falls back to English if empty).
BUG-75	Minor	Discard jumps to the Dashboard; Discard dialog has no Cancel	Confirm dialogs have a Cancel button again; Discard stays on the same Web Page tab.
BUG-76	Minor	Main tab: Status toggle alone cannot be published	The status switch alone now enables Publish (also for Home section visibility).
BUG-77	Minor	Storage blocks loading of uploaded Terms/Privacy PDFs (CORS)	cors.json prepared in the project. *One-time setup: Needs one command: gsutil cors set cors.json gs://web-app-admin-33b9a.firebasestorage.app (can't be run from the code).*
BUG-78	Minor	Arabic Font list offers Latin-only fonts	Arabic font list now has only Arabic fonts (Cairo, Tajawal, Almarai, Noto Sans Arabic, IBM Plex Sans Arabic).
BUG-58	Cosmetic	Dashboard: after "Hide" the link reads "Collapse" instead of "Show"	Link now reads 'Show' after Hide.
BUG-79	Cosmetic	Main publish dialog says "EDITING HOMEPAGE DETAILS"	Dialog now says 'EDITING MAIN DETAILS'.
BUG-80	Cosmetic	Services Cards button labelled "Published"	Button says 'Publish'.
BUG-81	Cosmetic	Public footer: "Copyright © 2026 Bayanat. ALL RIGHT RESERVED."	Text corrected to 'Bayanatz. All rights reserved.'
BUG-82	Cosmetic	Editing Main highlights "Home" in the top menu	Editing Main now highlights 'Web Page'.
